

Does the Ontario Line MSF belong in Thorncliffe Park?

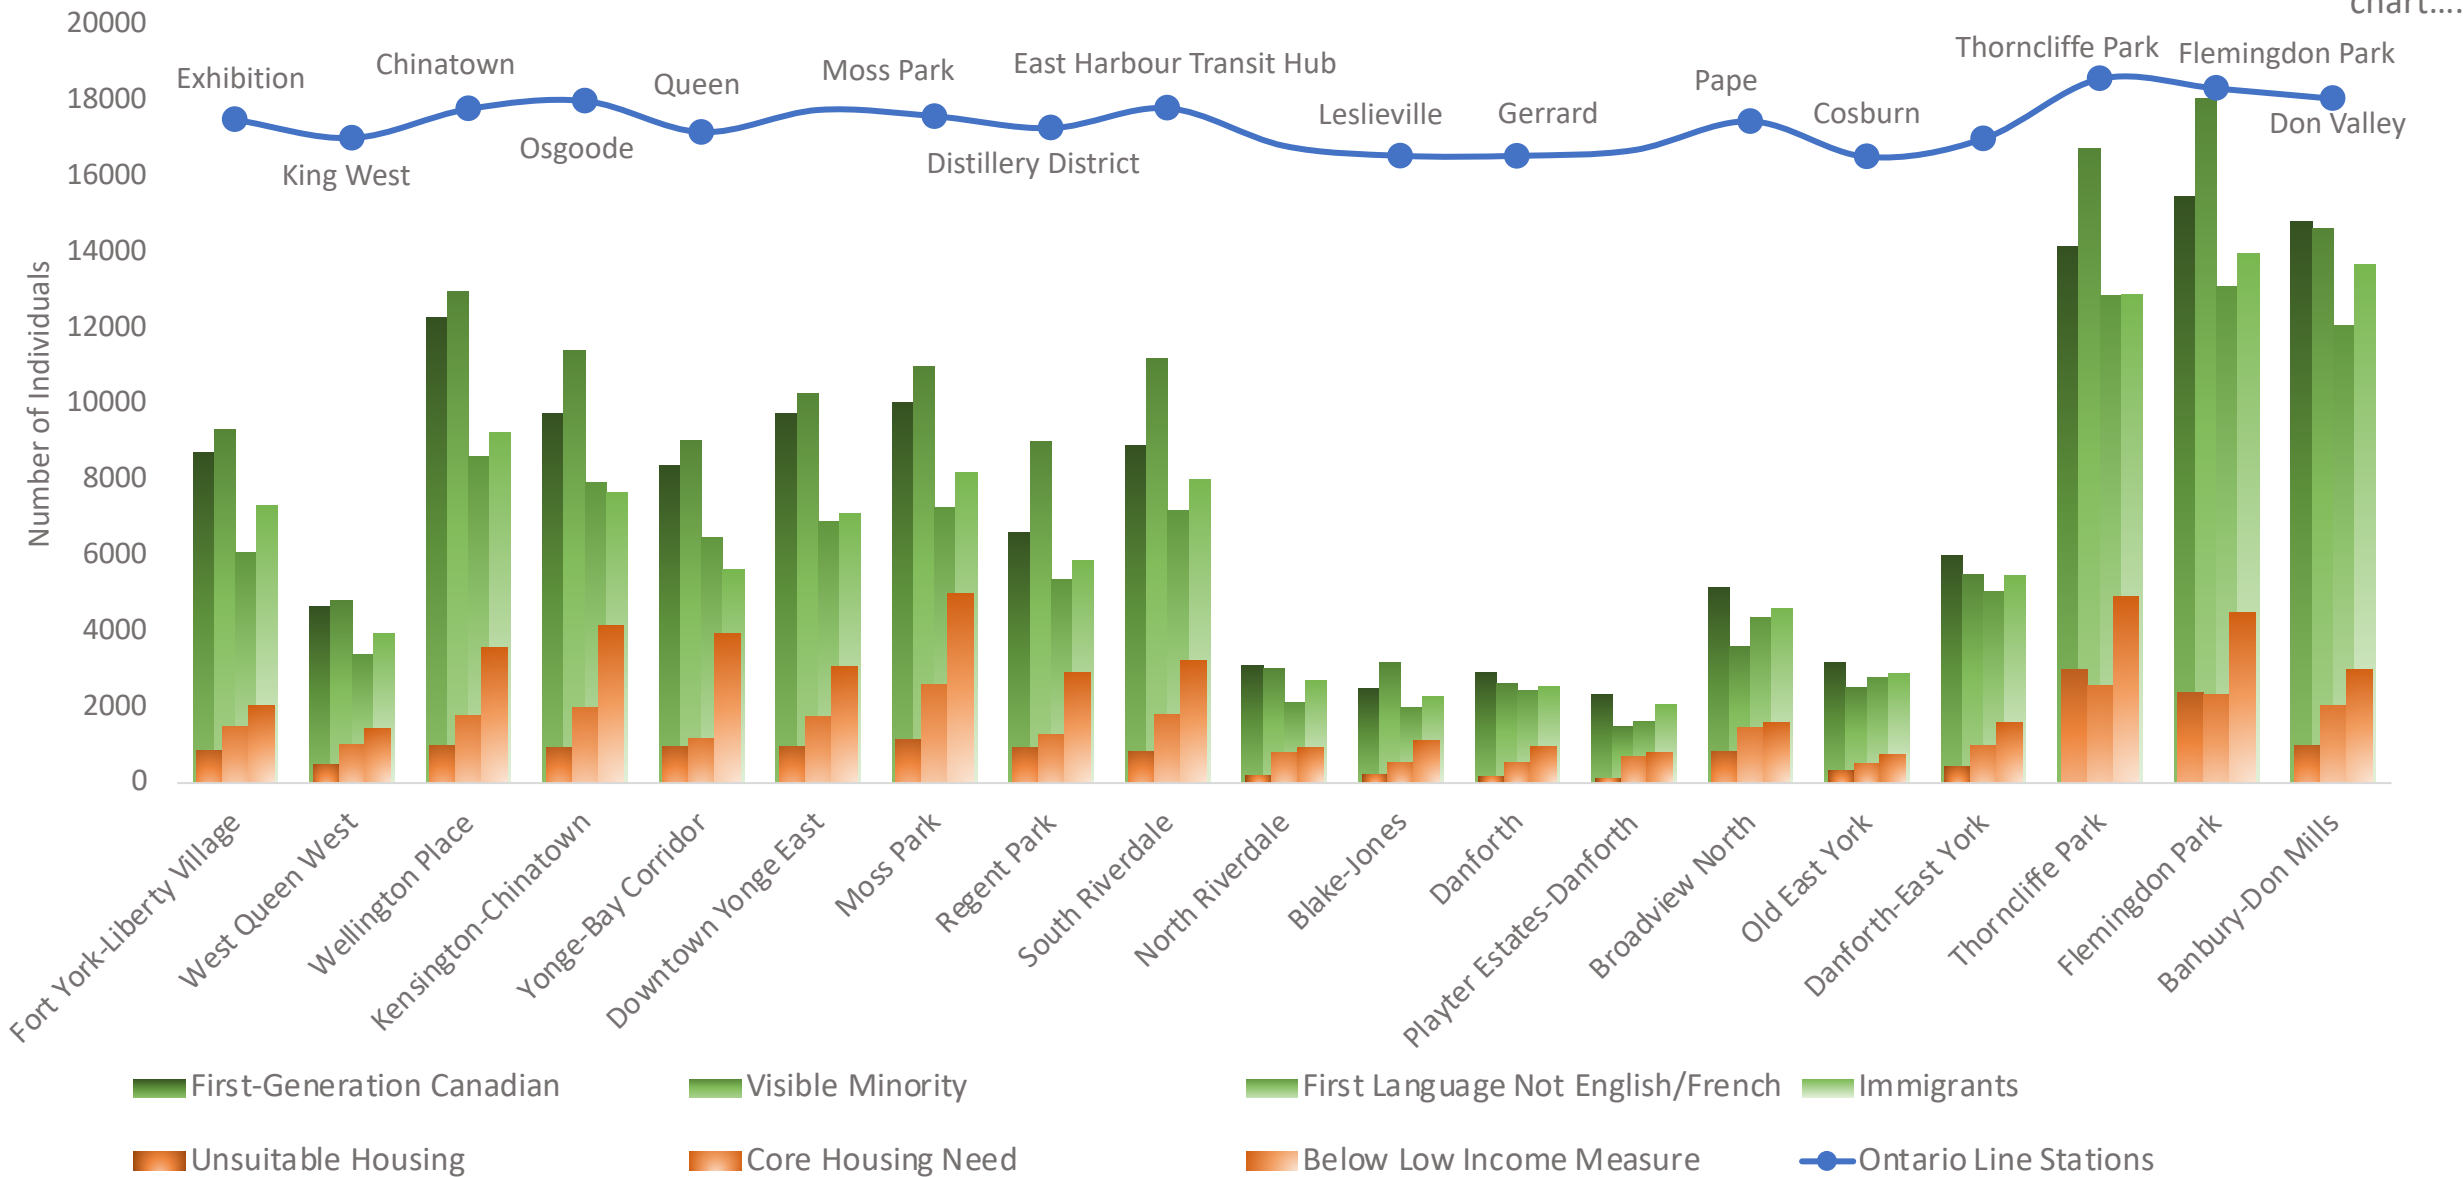

This is a summary of findings from a case study on **communication dynamics** between transit or infrastructure agencies and vulnerable communities, examining the consultation process surrounding Metrolinx's selection of Thorncliffe Park as the location for the Ontario Line's **Maintenance and Storage Facility (MSF)**.

Data from disparate sources were synthesized and translated into an accessible and evidence-based account, identifying contextual factors and points of contention where improved communication and transparency could reduce tensions and build trust between the province and residents of Thorncliffe Park.

Ontario Line Stations and Neighbourhood Populations

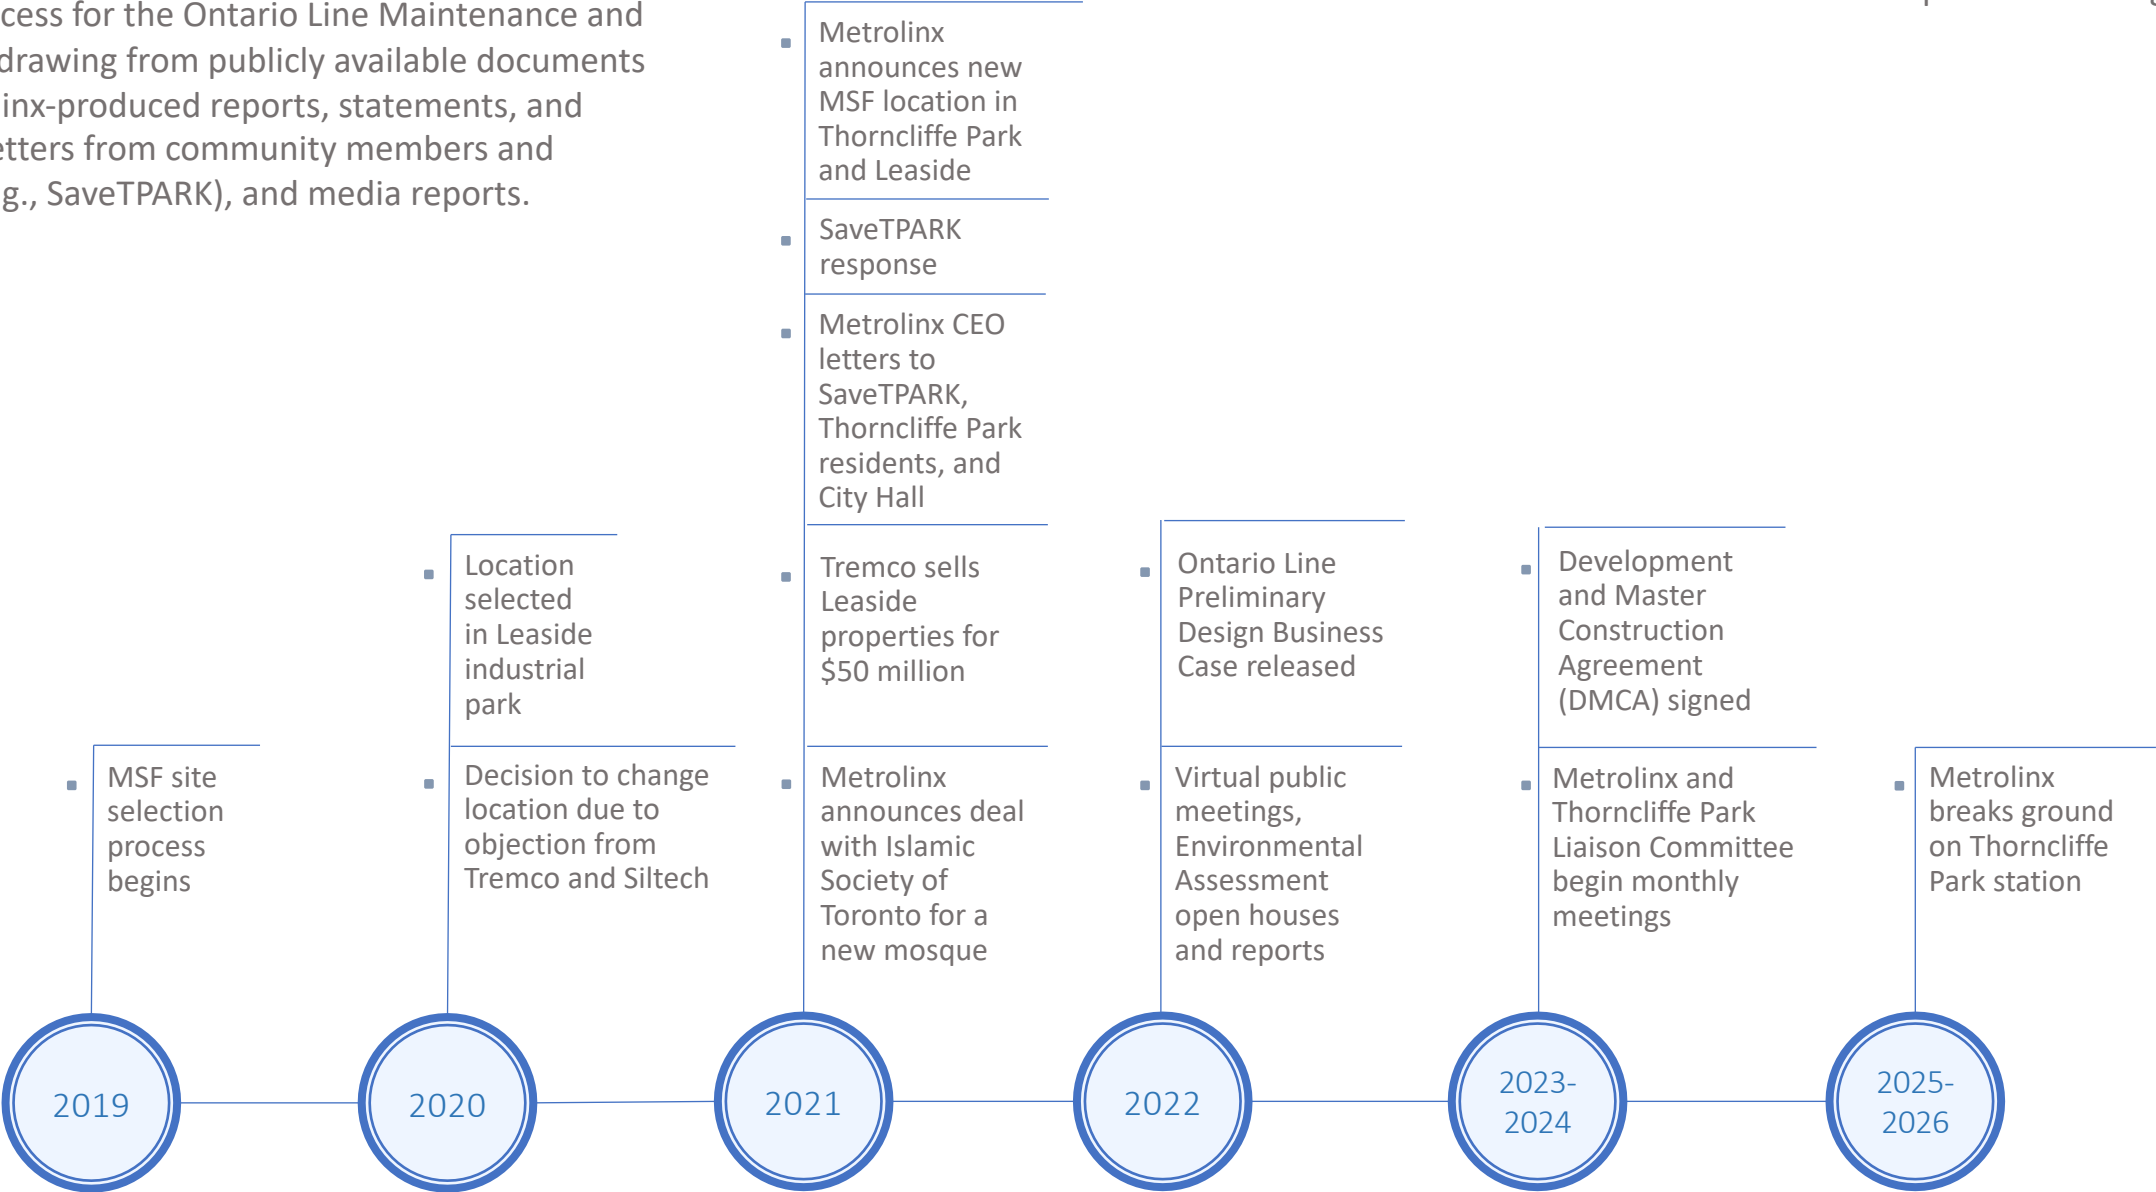

Thorncliffe Park is a high-density neighbourhood of 30,000 people, 79% of whom identify as visible minorities, and 45% of whom live at or below the poverty line. The selection of Thorncliffe Park as the site for the MSF aligns with a well-documented pattern of historic marginalization in the siting of large industrial facilities close to vulnerable communities. Timeline: Planning the MSF

This timeline details key events in the planning and consultation process for the Ontario Line Maintenance and Storage Facility, drawing from publicly available documents including Metrolinx-produced reports, statements, and presentations, letters from community members and organizations (e.g., SaveTPARK), and media reports.

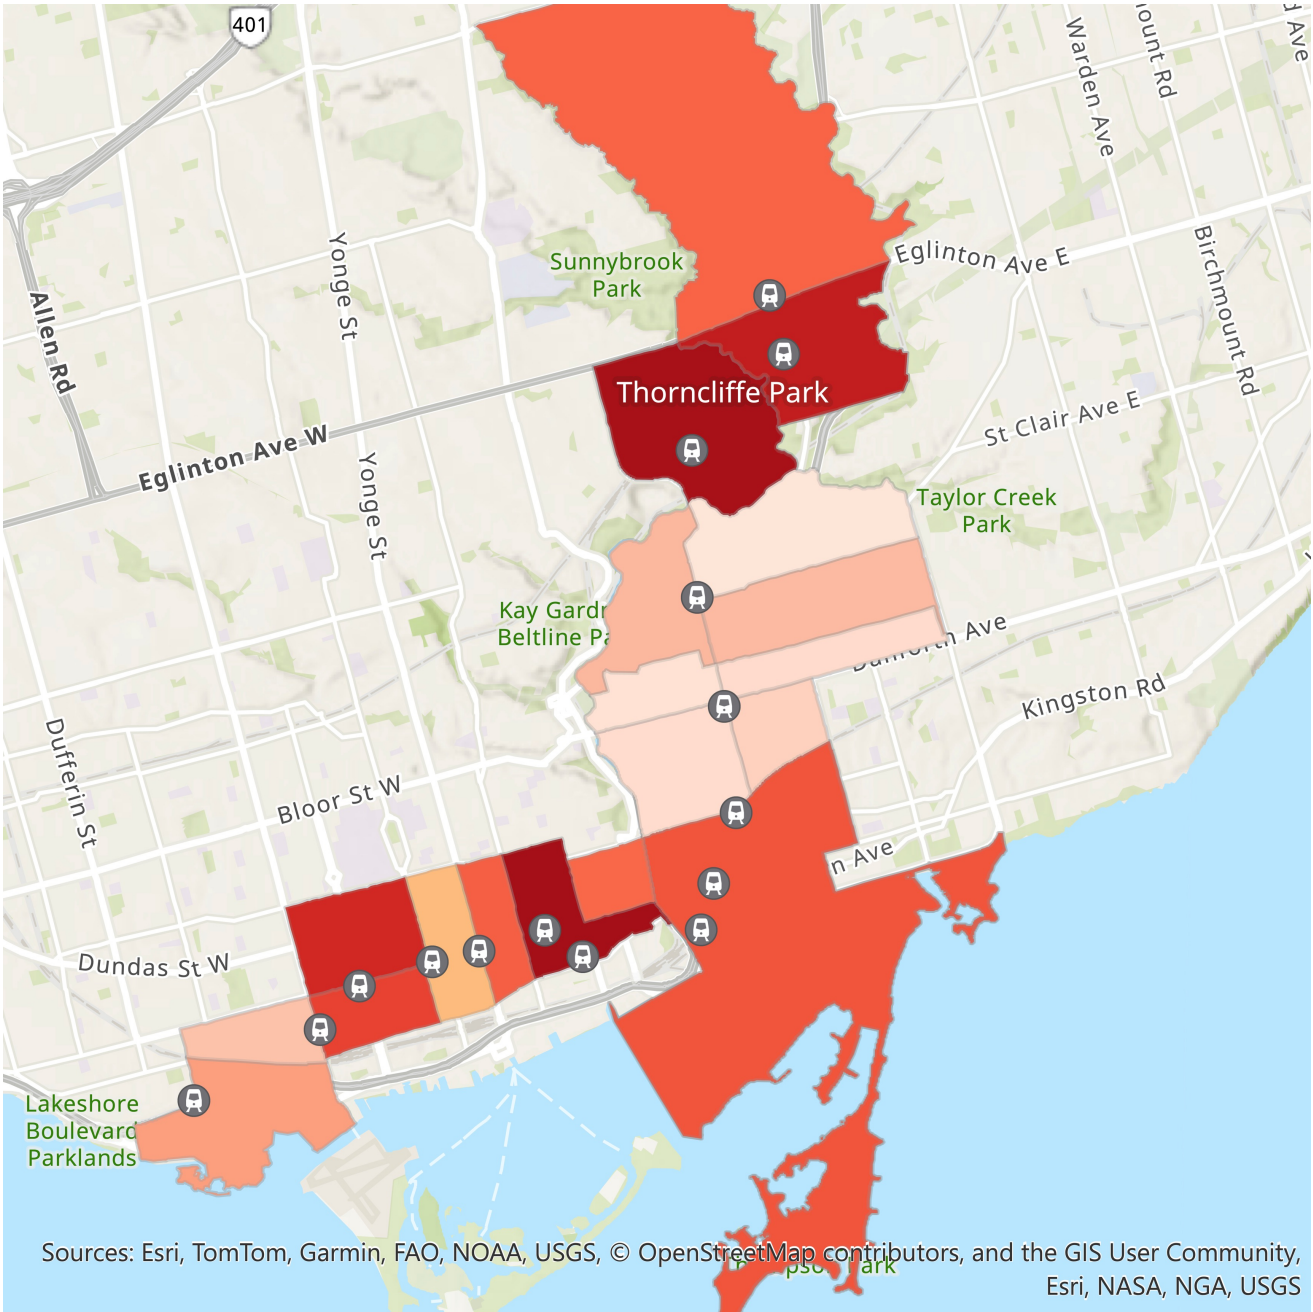

Many Thorncliffe Park residents feel that Metrolinx settled on the final location for the MSF *before* the consultation process had begun.

Ongoing points of contention

between Metrolinx representatives and community members include:

- Differing interpretations of the project’s net impact on local jobs and businesses
- Transparency and clarity of Metrolinx’s consultation process and official documents
- A \$50 million agreement between Metrolinx and the Islamic Society of Toronto for a new mosque in the neighbourhood
- An earlier plan to site the MSF entirely within an industrial area in Leaside, which was abandoned following objections from manufacturing companies Tremco and Siltech

The Ontario Line, including the Thorncliffe Park MSF, is projected to be complete in the early 2030s, with no opening date set.

This map visualizes the total number of individuals in neighbourhoods along the future route of the Ontario Line that are **living below the low-income measure**, according to Statistics Canada (2021).
